DETAILED ACTION

Response to Amendment

1. Applicant's amendments and accompanying remarks filed 1/27/03 have been entered and carefully considered. Applicant's amendment is found to overcome the 112 indefinite rejections set forth in the previous action. Despite this advance, the amendments are not found to patentably distinguish the claims over the prior art and Applicant's arguments are not found persuasive of patentability for reasons set forth herein below.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-3, 6-8, and 11-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over McGuire et al (6254965 B1) in view of Akahori et al (5310587) and Asahi (JP 404154573A), as set forth in the last action.

Applicant argues that McGuire fails to teach air permeability, thickness, compressive recovery, and distance between convex portions. These arguments have been made in previous responses and were answered in the final rejection of paper number 9 and the advisory action of paper number 11. It remains the examiner's position that it would have been obvious to increase the thickness of McGuire's sheet

Art Unit: 1771

and that if applicant's claimed air permeability, compressive recovery, and distance between convex portions are not inherent in the sheet of McGuire then it would have been obvious to modify these properties as well. Applicant has not attempted to argue against the examiner's assertion that altering these properties would have been an obvious modification. Applicant merely argues that McGuire does not explicitly state these properties in its disclosure. This argument is not persuasive because it fails to point out why these properties are not either inherent or obvious modifications of McGuire.

In response to applicant's arguments against the references individually, one cannot show nonobviousness by attacking references individually where the rejections are based on combinations of references. See *In re Keller*, 642 F.2d 413, 208 USPQ 871 (CCPA 1981); *In re Merck & Co.*, 800 F.2d 1091, 231 USPQ 375 (Fed. Cir. 1986). Here, applicant only argues that the structure of JP '573 is different from applicant's claimed structure. This is not persuasive because JP '573 is not relied upon to teach any structure. Moreover, applicant's claims do not prohibit the sheet from being perforated, pierced, or slit. Applicant does not point out reasons why Akahori would not render obvious the claimed properties. Said rejection is maintained from the last action.
